Transplant Program (Organ): Liver Release Date: January 6, 2022 Based on Data Available: Oct 31, 2021 SRTR Program-Specific Report Feedback?: SRTR@SRTR.org 1.877.970.SRTR (7787) http://www.srtr.org

COVID-19 Guide

Adjustments to Transplant Program and OPO Evaluation Metrics

The Scientific Registry of Transplant Recipients (SRTR), under contract from the Health Resources and Services Administration (HRSA), is charged with evaluating the performance of the nation's transplant system through publication of semi-annual transplant program-specific reports (PSRs) and organ procurement organization (OPO)-specific reports (OSRs). These reports contain performance metrics covering various time periods. For OPOs, these metrics include eligible death conversion rates and deceased donor organ yield. For transplant programs, they include pre-transplant mortality rates (formerly called waitlist mortality rates), transplant rates, organ offer acceptance rates, patient mortality after listing, and 1-month, 1-year, and 3-year posttransplant outcomes including graft survival and patient survival.

In response to the current global pandemic, SRTR modified the evaluation metrics for transplant programs and OPOs for the reports released in January 2021 and July 2021. Theses reports made adjustments to transplant program and OPO performance metrics so that data beyond the declaration of a national public health emergency on March 13, 2020, were not included in the metrics.

Modifications for the January 2022 reporting cycle were considered at the Analytic Methods Subcommittee of the SRTR Review Committee (SRC) at its meeting on March 24, 2021, and the full SRC meeting on April 27, 2021. Both the Analytic Methods Subcommittee and the full SRC recommended an ongoing carve out of the first quarter of the pandemic (March 13, 2020 through June 12, 2020) from adjusted performance metrics, as detailed below. These recommendations were reviewed by HRSA's Division of Transplantation, which oversees SRTR. HRSA approved these recommendations, which SRTR will implement for the January 2022 reporting cycle. These changes will remain in force beyond the January 2022 reporting cycle, unless otherwise amended:

Posttransplant Outcomes (including 1-month, 1-year, and 3-year graft and patient survival): Evaluation cohorts will exclude transplants performed between March 13, 2020 and June 12, 2020, inclusive of March 13 and June 12. Patients given transplants before March 13, 2020 will have follow-up censored on March 12, 2020. Patients given transplants after June 12, 2020 will resume normal follow-up. Follow-up will not resume for patients given transplants before March 13, 2020 who are alive with function on June 12, 2020; however, this may be reconsidered as SRTR continues to explore moving to a period-prevalent methodology:

1-month & 1-year Patient and Graft Survival Evaluations: Transplants 7/1/2018-3/12/2020, follow-up through 3/12/2020. Transplants 6/13/2020-12/31/2020, follow-up through 6/30/2021.

3-year Patient and Graft Survival Evaluations: Transplants 1/1/2016-6/30/2018; follow-up through 3/12/2020.

Pre-Transplant Mortality Rate (formerly called Waitlist Mortality Rate): Evaluation cohorts will exclude March 13, 2020 through June 12, 2020, inclusive of March 13 and June 12:

Days after listing (and before transplant) between 7/1/2019-3/12/2020 and 6/13/2020-6/30/2021.

Center Code: TXTX

Transplant Program (Organ): Liver Release Date: January 6, 2022 Based on Data Available: Oct 31, 2021 SRTR Program-Specific Report Feedback?: SRTR@SRTR.org 1.877.970.SRTR (7787) http://www.srtr.org

COVID-19 Guide

Transplant Rate: Evaluation cohorts will exclude March 13, 2020 through June 12, 2020, inclusive of March 13 and June 12:

Candidates on the waitlist 7/1/2019-3/12/2020 and 6/13/2020-6/30/2021.

Overall Rate of Mortality After Listing: Evaluation cohorts will exclude March 13, 2020 through June 12, 2020, inclusive of March 13 and June 12:

Evaluation period: 7/1/2019-3/12/2020 and 6/13/2020-6/30/2021.

Offer Acceptance Rate: These evaluations are based on normal reporting cohorts.

Offers received 7/1/2020-6/30/2021.

These decisions will apply to the evaluations released in the SRTR's semi-annual program-specific reports scheduled for release on January 6, 2022. These changes have been communicated to the leadership of the Organ Procurement and Transplantation Network's (OPTN) Membership and Professional Standards Committee (MSPC). These decisions will then be re-evaluated as more information becomes available in preparation for the release scheduled for July 2022.

As with the July 2021 reports, SRTR will continue to report descriptive data beyond March 12, 2020, e.g., waitlist counts, transplant counts, recipient characteristics, donor counts, donor characteristics, etc., but will alter data for performance evaluation metrics as described above.

User Guide

This report contains a wide range of useful information about the liver transplant program at Baylor University Medical Center. The report has three main sections:

- A. Program Summary
- B. Waiting List Information
- C. Transplant Information

The Program Summary is a one-page summary highlighting characteristics of the program, including the number of candidates on the waiting list, the number of transplants performed at the program, the number of patients being cared for by the program, and patient outcomes, including outcomes while on the waiting list (the transplant rate and the death rate while on the waiting list) and outcomes after transplant (patient and graft survival probabilities). If the program performed transplants in both adults and children, survival probabilities for adults and children (pediatrics) are provided separately. For each of the outcomes measures presented, a comparison is provided showing what would be expected at this program if it were performing as similar programs around the country perform when treating similar patients. More details regarding these outcome measures are provided in Sections B and C of the report.

The Waiting List Information section contains more detailed information on how many candidates are on the waiting list at the program, the types of candidates on the waiting list, how long candidates typically have to wait for a transplant at this program, how frequently candidates successfully receive a transplant, and how often candidates on the waiting list die before receiving a transplant.

Table B1 shows the activity on this program's waiting list during two recent 1-year periods and provides comparisons to all programs within this program's OPTN region (see http://optn.transplant.hrsa.gov/members/regions.asp for information on OPTN regions) and the nation as a whole. Tables B2 and B3 describe the candidates on the waiting list at this program, with comparisons to candidates waiting in the same donor service area (OPO/DSA) the OPTN region, and the nation as a whole.

Table B4 shows how many candidates were removed from the waiting list because they received a transplant. The program's transplant rate is calculated as the number of candidates who received a transplant divided by the person-years observed at the program (person-years is a combination of how many candidates were on the waiting list along with how long each candidate was followed since some candidates are not on the waiting list for the entire year). The transplant rate and comparisons to what would be expected at this program are presented in Figures B1 and B2. Figure B1 shows the transplant rate compared to what was expected at this program. The expected transplant rate is an estimate of what we would expect at this program if it were performing transplants at rates similar to other programs in the US with similar candidates on their waiting lists. The expected rate is only an estimate, and is made with a certain level of uncertainty. This uncertainty is shown in Figure B2. Figure B2 displays the ratio of the observed to the expected transplant rate. A ratio of 1 indicates that the observed transplant rate was equal to the expected transplant rate, while a ratio less than 1 indicates the observed rate was lower than expected rate and a ratio greater than 1 indicates the observed rate was higher than the expected rate. However, the level of uncertainty must be considered when interpreting these numbers. The 95% interval is also shown on Figure B2. This interval provides a range within which the true ratio of observed to expected transplant rates is likely to be. If this

Center Code: TXTX

Transplant Program (Organ): Liver Release Date: January 6, 2022 Based on Data Available: Oct 31, 2021 SRTR Program-Specific Report Feedback?: SRTR@SRTR.org 1.877.970.SRTR (7787) http://www.srtr.org

User Guide

confidence interval includes (crosses) 1.0, then we cannot say that this program's observed transplant rate is different from what would be expected. The observed transplant rate at this program was 162.2 per 100 person-years. Transplant rates are also provided for adult and pediatric patients separately along with comparisons to adult and pediatric rates in the DSA, the OPTN region, and the nation. Transplant rates are also presented excluding transplants from a living donor (Table B4D and Figures B1D-B3D). Please refer to the PSR Technical Methods documentation available at http://www.srtr.org for more detail regarding how expected rates are calculated.

The pre-transplant mortality rate (previously called the waiting list mortality rate) for candidates on the waiting list is presented in Table B5 and Figures B4-B6. These data are presented in the same way as the transplant rate data in the previous section. The intent of this table and figures is to describe risk of death once candidates are listed rather than while they are listed, but before they are transplanted. Therefore, time at risk and deaths after removal from the waiting list for reasons other than transplant, transfer to another transplant program, or recovery (no longer needing a transplant), and before any subsequent transplant, are included. As with transplant rates, mortality rates should be interpreted carefully taking into consideration the interval displayed in Figure B5. For a complete description of how observed and expected mortality rates are calculated, please refer to the technical documentation available at http://www.srtr.org.

Survival from listing is presented in Table B6 and Figures B7-B9. These data are presented in the same way as the pre-transplant mortality rate data in the previous section. The intent of this table and figures is to describe risk of death once candidates are listed rather than while they are listed, including after a transplant. As with transplant rates, mortality rates should be interpreted carefully taking into consideration the interval displayed in Figure B8. For a complete description of how observed and expected mortality rates are calculated, please refer to the technical documentation available at http://www.srtr.org.

Table B7 presents information on what happens to candidates on the waiting list by three different time points after listing: 6 months, 12 months, and 18 months. The table displays percentages of candidates who have died, been removed from the waiting list, been transplanted, or been transferred or lost-to-follow-up. Tables B8 and B9 provide more detail regarding how many candidates have received a deceased donor transplant by certain time points during the first 3 years after being put on the transplant waiting list. Each row of Tables B8 and B9 presents the percent of candidates who received a deceased donor transplant by each time point. Table B10 presents data on the time it took for different percentages of patients to be transplanted for candidates added to the list between 07/01/2015 and 12/31/2020. The time it took for 5% (the 5th percentile) of patients to receive a transplant at this program was 0.1 months. If "Not Observed" is displayed in the table, then too few candidates received transplants before 06/30/2021 to calculate a particular percentile of transplant times.

Table B11 contains a summary of the offer acceptance practices of the program. The offer acceptance ratio indicates whether the program is more or less likely to accept offers than the average program. If the offer acceptance ratio is greater than 1.0, then the program tends to accept more offers than average; if the offer acceptance ratio is less than 1.0, then the program tends to accept fewer offers than average. Figure B10 shows the distribution of program offer acceptance rates as well as the offer acceptance rate for this program. Figures B11 - B15 similarly show offer acceptance rates for subsets

Transplant Program (Organ): Liver Release Date: January 6, 2022 Based on Data Available: Oct 31, 2021 SRTR Program-Specific Report Feedback?: SRTR@SRTR.org 1.877.970.SRTR (7787) http://www.srtr.org

User Guide

of offers.

The Transplant Information section begins with descriptions of transplant recipients in Tables C1 and C2. Data on recipients of deceased donor transplants are presented (Tables C1D and C2D); if applicable, data on recipients of living donor transplants are presented separately (Tables C1L and C2L). Comparisons to the region and the nation as a whole are provided. A description of the deceased donors used at this program is provided in Table C3D, along with characteristics of living donors in Table C3L, if applicable. Finally, information on the transplant procedure for deceased and living donor transplants is presented in Tables C4D and C4L, respectively.

Starting with Table C5, transplant outcomes are presented along with comparisons to what would be expected at this program and what happened in the nation as a whole. Tables C5-C10 present information on graft survival (survival of the transplanted organ), with data presented separately for adult and pediatric recipients. Patients are followed from the time of transplant until either failure of the transplanted organ or death, whichever comes first. Please refer to the technical methods for more information on these calculations (http://www.srtr.org).

While Tables C5-C10 present data on graft survival, Tables C11-C16 present information on patient survival. For these tables, patients are followed from the time of transplant until death, regardless of whether the transplant is functioning or the patient required another transplant to survive.

Tables C17 and C18 summarize the multiorgan transplant outcomes at this program. The summary statistics in these tables are descriptive and are not risk-adjusted for different donor and candidate characteristics.

Table D1 shows the rates of follow-up for living donors.

Additional information regarding the technical methods and the risk adjustment models used to estimate expected event rates is available on the SRTR website at http://www.srtr.org. We welcome and encourage feedback on these reports. Please feel free to share feedback with the SRTR at the following e-mail: srtr@srtr.org.

Center Code: TXTX

Transplant Program (Organ): Liver Release Date: January 6, 2022 Based on Data Available: Oct 31, 2021 SRTR Program-Specific Report Feedback?: SRTR@SRTR.org 1.877.970.SRTR (7787) http://www.srtr.org

Table B4. Transplant rates: 07/01/2019 - 03/12/2020, 06/13/2020 - 06/30/2021

Waiting List Registrations	This Center	OPO/DSA	Region	U.S.
All Candidates				_
Count on waiting list at start*	74	384	1,525	13,260
Person Years**	96.2	610.6	2,601.4	22,013.6
Removals for Transplant	156	557	1,707	16,038
Adult (18+) Candidates				
Count on waiting list at start*	74	363	1,473	12,791
Person Years**	96.2	566.7	2,503.0	21,264.9
Removals for transpant	156	537	1,599	15,086
Pediatric (<18) Candidates				
Count on waiting list at start*				
Person Years**				
Removals for transplant				

^{*} Counts in this table may be lower than similar counts in other waiting list tables, such as Table B1. A small percentage (~1%) of patients are found to have died or been transplanted before being removed from the waiting list, so these patients are excluded if the event occurs prior to the start of the study period. Inactive time on the waiting list is included in the calculations for this table.

^{**} Person years are calculated as days (converted to fractional years). The number of days from July 1 or from the date of first wait listing until death, transplant, removal from the waiting list or June 30. Person years excludes time on the waiting list between March 13, 2020 and June 12, 2020.

Center Code: TXTX

Transplant Program (Organ): Liver Release Date: January 6, 2022 Based on Data Available: Oct 31, 2021 SRTR Program-Specific Report Feedback?: SRTR@SRTR.org 1.877.970.SRTR (7787) http://www.srtr.org

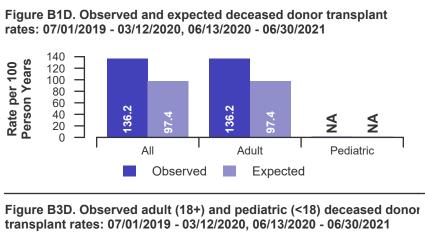

B. Waiting List Information

Table B4D. Deceased donor transplant rates: 07/01/2019 - 03/12/2020, 06/13/2020 - 06/30/2021

Waiting List Registrations	This Center	OPO/DSA	Region	U.S.
All Candidates				
Count on waiting list at start*	74	384	1,525	13,260
Person Years**	96.2	610.6	2,601.4	22,013.6
Removals for Transplant	131	523	1,588	15,082
Adult (18+) Candidates				
Count on waiting list at start*	74	363	1,473	12,791
Person Years**	96.2	566.7	2,503.0	21,264.9
Removals for transpant	131	503	1,486	14,265
Pediatric (<18) Candidates				
Count on waiting list at start*				
Person Years**				
Removals for transplant				

^{*} Counts in this table may be lower than similar counts in other waiting list tables, such as Table B1. A small percentage (~1%) of patients are found to have died or been transplanted before being removed from the waiting list, so these patients are excluded if the event occurs prior to the start of the study period. Inactive time on the waiting list is included in the calculations for this table.

^{**} Person years are calculated as days (converted to fractional years). The number of days from July 1 or from the date of first wait listing until death, transplant, removal from the waiting list or June 30. Person years excludes time on the waiting list between March 13, 2020 and June 12, 2020.

Table B6. Rates of patient mortality after listing: 07/01/2019 - 03/12/2020, 06/13/2020 - 06/30/2021

Waiting List Registrations	This Center	OPO/DSA	Region	U.S.
All Patients				
Count at risk during the evaluation period	932	2,608	8,937	75,013
Person-years*	1,163.7	3,130.5	10,519.8	88,733.8
Number of Deaths	73	234	824	6,078
Adult (18+) Patients				
Count at risk during the evaluation period	931	2,513	8,466	70,657
Person-years*	1,161.9	3,014.3	9,937.7	83,332.5
Number of Deaths	73	232	808	5,962
Pediatric (<18) Patients				
Count at risk during the evaluation period	1	95	471	4,356
Person-years*	1.7	116.3	582.1	5,401.3
Number of Deaths	0	2	16	116

^{*} Person-years are calculated as days (converted to fractional years). The number of days from 07/01/2019, or from the date of first wait listing until death, reaching 5 years after listing or June 30, 2021. Person years excludes time on the waiting list between March 13, 2020 and June 12, 2020.

^{**} Patient mortality after listing describes the relative survival experience of patients after listing. It depends on many factors, some of which are outside of the control of the transplant program. For example, availability of organs may not be the same in every part of the country.

Center Code: TXTX

B. Waiting List Information

Table B10. Time to transplant for waiting list candidates*

Candidates registered on the waiting list between 07/01/2015 and 12/31/2020

	Months to Transplant**				
Percentile	Center	OPO/DSA	Region	U.S.	
5th	0.1	0.1	0.1	0.1	
10th	0.2	0.2	0.3	0.2	
25th	0.5	0.7	1.6	1.3	
50th (median time to transplant)	2.5	6.2	11.0	8.7	
75th	7.5	Not Observed	Not Observed	Not Observed	

^{*} If cells contain "Not Observed" fewer than that percentile of patients had received a transplant. For example, the 50th percentile of time to transplant is the time when 50% of candidates have received transplants. If waiting times are long, then the 50th percentile may not be observed during the follow-up period for this table. Also, if more than 50% of candidates are removed from the list due to death or other reasons before receiving transplants, then the 50th percentile of time to transplant will not be observed.

^{**} Censored on 06/30/2021. Calculated as the months after listing, during which the corresponding percent of all patients initially listed had received a transplant.

Offer Acceptance Ratio*	0.66	0.60	0.85	1.04
95% Credible Interval**	[0.18, 1.44]			

^{*} The offer acceptance ratio estimates the relative offer acceptance practice of Baylor University Medical Center compared to the national offer acceptance practice. A ratio above one indicates the program is more likely to accept an offer compared to national offer acceptance practices (e.g., an offer acceptance ratio of 1.25 indicates a 25% more likely to accept an offer), while a ratio below one indicates the program is less likely to accept an offer compared to national offer acceptance practices (e.g., an offer acceptance ratio of 0.75 indicates a 25% less likely to accept an offer).

^{**} As an example, the 95% Credible Interval for the overall offer acceptance ratio, [0.92, 1.56], indicates the location of TXTX's true offer acceptance ratio with 95% probability. The best estimate is 22% more likely to accept an offer compared to national acceptance behavior, but TXTX's performance could plausibly range from 8% reduced acceptance up to 56% higher acceptance.

C. Transplant Information

Table C5. Adult (18+) 1-month survival with a functioning graft

Single organ transplants performed between 07/01/2018 and 03/12/2020, and 06/13/2020 and 12/31/2020 Deaths and retransplants are considered graft failures

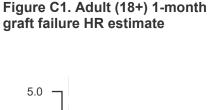

Follow-up ends on 3/12/2020 for recipients transplanted prior to 3/13/2020

	IXIX	U.S.
Number of transplants evaluated	198	16,846
Estimated probability of surviving with a functioning graft at 1 month (unadjusted for patient and donor characteristics)	94.42%	96.75%
Expected probability of surviving with a functioning graft at 1 month (adjusted for patient and donor characteristics)	96.82%	
Number of observed graft failures (including deaths) during the first month after transplant	11	540
Number of expected graft failures (including deaths) during the first month after transplant	5.86	
Estimated hazard ratio*	1.65	
95% credible interval for the hazard ratio**	[0.88, 2.67]	

^{*} The hazard ratio provides an estimate of how Baylor University Medical Center's results compare with what was expected based on modeling the transplant outcomes from all U.S. programs. A ratio above 1 indicates higher than expected graft failure rates (e.g., a hazard ratio of 1.5 would indicate 50% higher risk), and a ratio below 1 indicates lower than expected graft failure rates (e.g., a hazard ratio of 0.75 would indicate 25% lower risk). If TXTX's graft failure rate were precisely the expected rate, the estimated hazard ratio would be 1.0.

** The 95% credible interval, [0.88, 2.67], indicates the location of TXTX's true hazard ratio with 95% probability. The best estimate is 65% higher risk

of graft failure compared to an average program, but TXTX's performance could plausibly range from 12% reduced risk up to 167% increased risk.

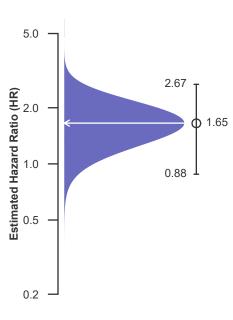

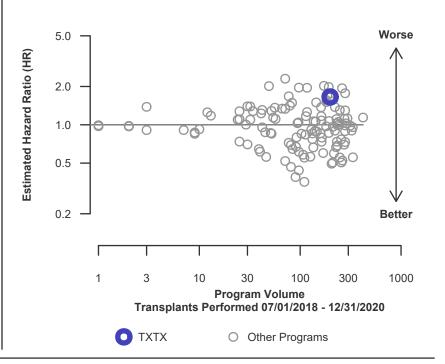

Figure C2. Adult (18+) 1-month graft failure HR program comparison

Center Code: TXTX

Transplant Program (Organ): Liver Release Date: January 6, 2022 Based on Data Available: Oct 31, 2021 SRTR Program-Specific Report Feedback?: SRTR@SRTR.org 1.877.970.SRTR (7787) http://www.srtr.org

C. Transplant Information

Table C5D. Adult (18+) 1-month survival with a functioning deceased donor graft Single organ transplants performed between 07/01/2018 and 03/12/2020, and 06/13/2020 and 12/31/2020 Deaths and retransplants are considered graft failures

Follow-up ends on 3/12/2020 for recipients transplanted prior to 3/13/2020

	ТХТХ	U.S.
Number of transplants evaluated	171	15,864
Estimated probability of surviving with a functioning graft at 1 month (unadjusted for patient and donor characteristics)	94.72%	96.71%
Expected probability of surviving with a functioning graft at 1 month (adjusted for patient and donor characteristics)	96.73%	
Number of observed graft failures (including deaths) during the first month after transplant	9	515
Number of expected graft failures (including deaths) during the first month after transplant	5.21	
Estimated hazard ratio*	1.52	
95% credible interval for the hazard ratio**	[0.76, 2.55]	

^{*} The hazard ratio provides an estimate of how Baylor University Medical Center's results compare with what was expected based on modeling the transplant outcomes from all U.S. programs. A ratio above 1 indicates higher than expected graft failure rates (e.g., a hazard ratio of 1.5 would indicate 50% higher risk), and a ratio below 1 indicates lower than expected graft failure rates (e.g., a hazard ratio of 0.75 would indicate 25% lower risk). If TXTX's graft failure rate were precisely the expected rate, the estimated hazard ratio would be 1.0.

** The 95% credible interval, [0.76, 2.55], indicates the location of TXTX's true hazard ratio with 95% probability. The best estimate is 52% higher risk

of graft failure compared to an average program, but TXTX's performance could plausibly range from 24% reduced risk up to 155% increased risk.

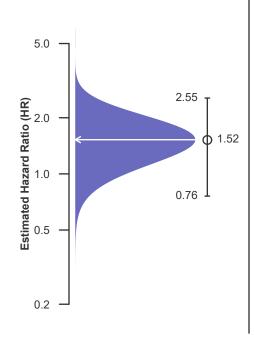

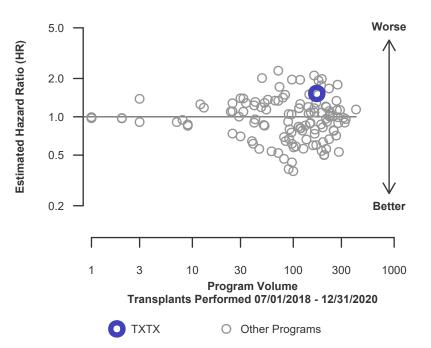

Figure C2D. Adult (18+) 1-month deceased donor graft failure HR program comparison

Center Code: TXTX

C. Transplant Information

Table C5L. Adult (18+) 1-month survival with a functioning living donor graft

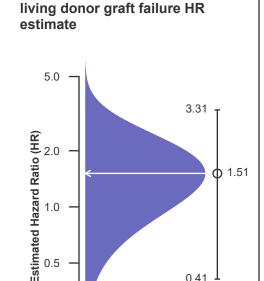

Single organ transplants performed between 07/01/2018 and 03/12/2020, and 06/13/2020 and 12/31/2020 Deaths and retransplants are considered graft failures

Follow-up ends on 3/12/2020 for recipients transplanted prior to 3/13/2020

	TXTX	U.S.
Number of transplants evaluated	27	982
Estimated probability of surviving with a functioning graft at 1 month (unadjusted for patient and donor characteristics)	92.44%	97.42%
Expected probability of surviving with a functioning graft at 1 month (adjusted for patient and donor characteristics)	97.42%	
Number of observed graft failures (including deaths) during the first month after transplant	2	25
Number of expected graft failures (including deaths) during the first month after transplant	0.65	
Estimated hazard ratio*	1.51	
95% credible interval for the hazard ratio**	[0.41, 3.31]	

^{*} The hazard ratio provides an estimate of how Baylor University Medical Center's results compare with what was expected based on modeling the transplant outcomes from all U.S. programs. A ratio above 1 indicates higher than expected graft failure rates (e.g., a hazard ratio of 1.5 would indicate 50% higher risk), and a ratio below 1 indicates lower than expected graft failure rates (e.g., a hazard ratio of 0.75 would indicate 25% lower risk). If TXTX's graft failure rate were precisely the expected rate, the estimated hazard ratio would be 1.0.

** The 95% credible interval, [0.41, 3.31], indicates the location of TXTX's true hazard ratio with 95% probability. The best estimate is 51% higher risk

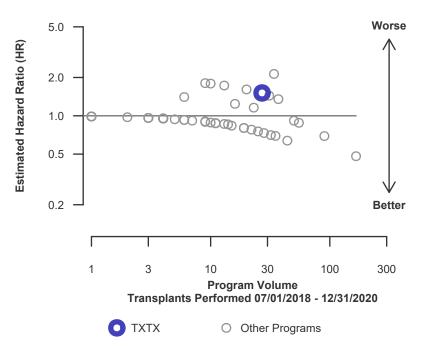

0.5

C. Transplant Information

Table C6. Adult (18+) 1-year survival with a functioning graft

Single organ transplants performed between 07/01/2018 and 03/12/2020, and 06/13/2020 and 12/31/2020 Deaths and retransplants are considered graft failures

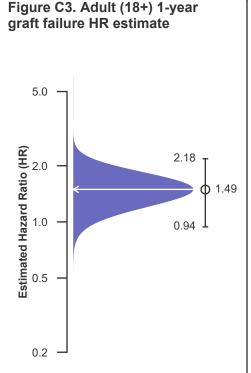

Follow-up ends on 3/12/2020 for recipients transplanted prior to 3/13/2020

	TXTX	U.S.
Number of transplants evaluated	198	16,846
Estimated probability of surviving with a functioning graft at 1 year (unadjusted for patient and donor characteristics)	89.47%	91.90%
Expected probability of surviving with a functioning graft at 1 year (adjusted for patient and donor characteristics)	91.66%	
Number of observed graft failures (including deaths) during the first year after transplant	20	1,109
Number of expected graft failures (including deaths) during the first year after transplant	12.73	
Estimated hazard ratio*	1.49	
95% credible interval for the hazard ratio**	[0.94, 2.18]	

^{*} The hazard ratio provides an estimate of how Baylor University Medical Center's results compare with what was expected based on modeling the transplant outcomes from all U.S. programs. A ratio above 1 indicates higher than expected graft failure rates (e.g., a hazard ratio of 1.5 would indicate 50% higher risk), and a ratio below 1 indicates lower than expected graft failure rates (e.g., a hazard ratio of 0.75 would indicate 25% lower risk). If TXTX's graft failure rate were precisely the expected rate, the estimated hazard ratio would be 1.0.

** The 95% credible interval, [0.94, 2.18], indicates the location of TXTX's true hazard ratio with 95% probability. The best estimate is 49% higher risk

of graft failure compared to an average program, but TXTX's performance could plausibly range from 6% reduced risk up to 118% increased risk.

Table C10L. Pediatric (<18) 3-year survival with a functioning living donor graft Single organ transplants performed between 01/01/2016 and 06/30/2018 Deaths and retransplants are considered graft failures Follow-up ends on 3/12/2020 for recipients transplanted prior to 3/13/2020

This center did not perform any transplants relevant to this table during 01/01/2016-06/30/2018

Figure C11L. Pediatric (<18)
3-year living donor graft failure
HR estimate

Figure C12L. Pediatric (<18) 3-year living donor graft failure HR program comparison

This center did not perform any transplants relevant to this figure during 01/01/2016-06/30/2018

Center Code: TXTX

Transplant Program (Organ): Liver Release Date: January 6, 2022 Based on Data Available: Oct 31, 2021 SRTR Program-Specific Report Feedback?: SRTR@SRTR.org 1.877.970.SRTR (7787) http://www.srtr.org

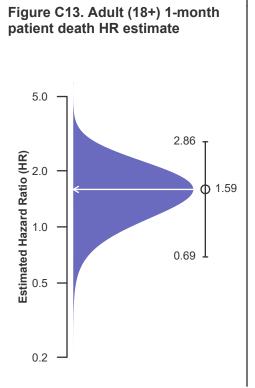

C. Transplant Information

Table C11. Adult (18+) 1-month patient survival

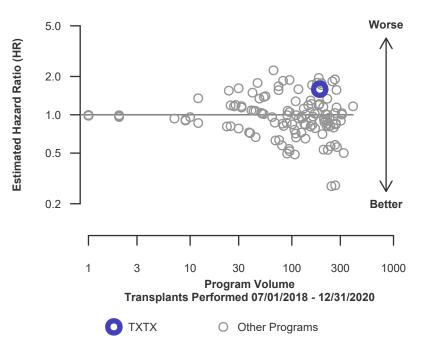

Single organ transplants performed between 07/01/2018 and 03/12/2020, and 06/13/2020 and 12/31/2020 Retransplants excluded

	TXTX	U.S.
Number of transplants evaluated	188	16,229
Estimated probability of surviving at 1 month (unadjusted for patient and donor characteristics)	96.79%	98.03%
Expected probability of surviving at 1 month (adjusted for patient and donor characteristics)	98.35%	
Number of observed deaths during the first month after transplant	6	315
Number of expected deaths during the first month after transplant	3.04	
Estimated hazard ratio*	1.59	
95% credible interval for the hazard ratio**	[0.69, 2.86]	

^{*} The hazard ratio provides an estimate of how Baylor University Medical Center's results compare with what was expected based on modeling the transplant outcomes from all U.S. programs. A ratio above 1 indicates higher than expected patient death rates (e.g., a hazard ratio of 1.5 would indicate 50% higher risk), and a ratio below 1 indicates lower than expected patient death rates (e.g., a hazard ratio of 0.75 would indicate 25% lower risk). If TXTX's patient death rate were precisely the expected rate, the estimated hazard ratio would be 1.0.

^{**} The 95% credible interval, [0.69, 2.86], indicates the location of TXTX's true hazard ratio with 95% probability. The best estimate is 59% higher risk of patient death compared to an average program, but TXTX's performance could plausibly range from 31% reduced risk up to 186% increased risk.

Center Code: TXTX

Transplant Program (Organ): Liver Release Date: January 6, 2022 Based on Data Available: Oct 31, 2021 SRTR Program-Specific Report Feedback?: SRTR@SRTR.org 1.877.970.SRTR (7787) http://www.srtr.org

C. Transplant Information

Table C11D. Adult (18+) 1-month patient survival (deceased donor graft recipients)

Single organ transplants performed between 07/01/2018 and 03/12/2020, and 06/13/2020 and 12/31/2020 Retransplants excluded

Follow-up ends on 3/12/2020 for recipients transplanted prior to 3/13/2020

	TXTX	U.S.
Number of transplants evaluated	161	15,255
Estimated probability of surviving at 1 month (unadjusted for patient and donor characteristics)	96.88%	97.95%
Expected probability of surviving at 1 month (adjusted for patient and donor characteristics)	98.18%	
Number of observed deaths during the first month after transplant	5	309
Number of expected deaths during the first month after transplant	2.88	
Estimated hazard ratio*	1.44	
95% credible interval for the hazard ratio**	[0.58, 2.68]	

^{*} The hazard ratio provides an estimate of how Baylor University Medical Center's results compare with what was expected based on modeling the transplant outcomes from all U.S. programs. A ratio above 1 indicates higher than expected patient death rates (e.g., a hazard ratio of 1.5 would indicate 50% higher risk), and a ratio below 1 indicates lower than expected patient death rates (e.g., a hazard ratio of 0.75 would indicate 25% lower risk). If TXTX's patient death rate were precisely the expected rate, the estimated hazard ratio would be 1.0.

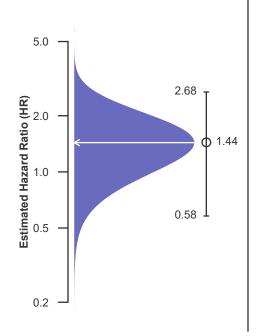

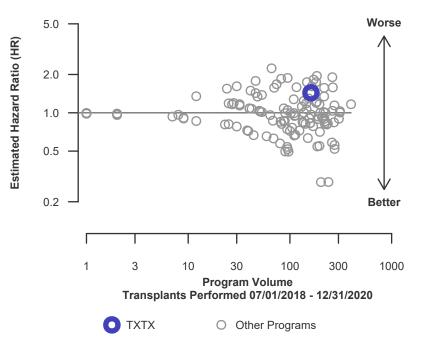

Figure C14D. Adult (18+) 1-month patient death HR program comparison (deceased donor grafts)

^{**} The 95% credible interval, [0.58, 2.68], indicates the location of TXTX's true hazard ratio with 95% probability. The best estimate is 44% higher risk of patient death compared to an average program, but TXTX's performance could plausibly range from 42% reduced risk up to 168% increased risk.

Center Code: TXTX

C. Transplant Information

Table C16. Pediatric (<18) 3-year patient survival

Single organ transplants performed between 01/01/2016 and 06/30/2018 Retransplants excluded

	TXTX	U.S.
Number of transplants evaluated	1	1,294
Estimated probability of surviving at 3 years (unadjusted for patient and donor characteristics)	100.00%	92.91%
Expected probability of surviving at 3 years (adjusted for patient and donor characteristics)	92.50%	
Number of observed deaths during the first 3 years after transplant	0	87
Number of expected deaths during the first 3 years after transplant	0.06	
Estimated hazard ratio*	0.97	
95% credible interval for the hazard ratio**	[0.12, 2.70]	

^{*} The hazard ratio provides an estimate of how Baylor University Medical Center's results compare with what was expected based on modeling the transplant outcomes from all U.S. programs. A ratio above 1 indicates higher than expected patient death rates (e.g., a hazard ratio of 1.5 would indicate 50% higher risk), and a ratio below 1 indicates lower than expected patient death rates (e.g., a hazard ratio of 0.75 would indicate 25% lower risk). If TXTX's patient death rate were precisely the expected rate, the estimated hazard ratio would be 1.0.

^{**} The 95% credible interval, [0.12, 2.70], indicates the location of TXTX's true hazard ratio with 95% probability. The best estimate is 3% lower risk of patient death compared to an average program, but TXTX's performance could plausibly range from 88% reduced risk up to 170% increased risk.

Number of transplants evaluated	1	1,131
Estimated probability of surviving at 3 years (unadjusted for patient and donor characteristics)	100.00%	92.50%
Expected probability of surviving at 3 years (adjusted for patient and donor characteristics)	92.50%	
Number of observed deaths during the first 3 years after transplant	0	80
Number of expected deaths during the first 3 years after transplant	0.06	
Estimated hazard ratio*	0.97	
95% credible interval for the hazard ratio**	[0.12, 2.70]	

^{*} The hazard ratio provides an estimate of how Baylor University Medical Center's results compare with what was expected based on modeling the transplant outcomes from all U.S. programs. A ratio above 1 indicates higher than expected patient death rates (e.g., a hazard ratio of 1.5 would indicate 50% higher risk), and a ratio below 1 indicates lower than expected patient death rates (e.g., a hazard ratio of 0.75 would indicate 25% lower risk). If TXTX's patient death rate were precisely the expected rate, the estimated hazard ratio would be 1.0.

^{**} The 95% credible interval, [0.12, 2.70], indicates the location of TXTX's true hazard ratio with 95% probability. The best estimate is 3% lower risk of patient death compared to an average program, but TXTX's performance could plausibly range from 88% reduced risk up to 170% increased risk.

Center Code: TXTX

Transplant Program (Organ): Liver Release Date: January 6, 2022 Based on Data Available: Oct 31, 2021 SRTR Program-Specific Report Feedback?: SRTR@SRTR.org 1.877.970.SRTR (7787) http://www.srtr.org

C. Transplant Information

Table C16L. Pediatric (<18) 3-year patient survival (living donor graft recipients) Single organ transplants performed between 01/01/2016 and 06/30/2018 Retransplants excluded Follow-up ends on 3/12/2020 for recipients transplanted prior to 3/13/2020

This center did not perform any transplants relevant to this table during 01/01/2016-06/30/2018

Figure C23L. Pediatric (<18)
3-year patient death HR estimate (living donor grafts)

Figure C24L. Pediatric (<18) 3-year patient death HR program comparison (living donor grafts)

This center did not perform any transplants relevant to this figure during 01/01/2016-06/30/2018
