RE: UF Health Shands Hospital (FLUF)
Transplant Program (Organ): Kidney
Release Date: January 6, 2026

C. Transplant Information
Table C4L. Living donor transplant characteristics

In the Living Donor Transplant Characteristics (Table C4L) section, the transplant characteristic “Dialysis in First Week After Transplant (%)” is inaccurately reported as 6.2% for “Yes.” Review of the cohort confirms that no living donor kidney transplant recipients required dialysis within the first week following transplant. The correct percentage is 0%.

Chad E. Rhoden, DNP, APRN-BC
